

# STARFLEET EXPLORER

## USER INSTRUCTIONS

**MB&F** + *L'ÉPÉE 1839*

# CONGRATULATIONS

Congratulations, you have just adopted your Starfleet Explorer, created from a partnership between

La Manufacture **L'Épée 1839** and **MB&F**.

Starfleet Explorer has been developed with passion and care by our master watchmakers in Delémont – Switzerland

## **CONTENTS**

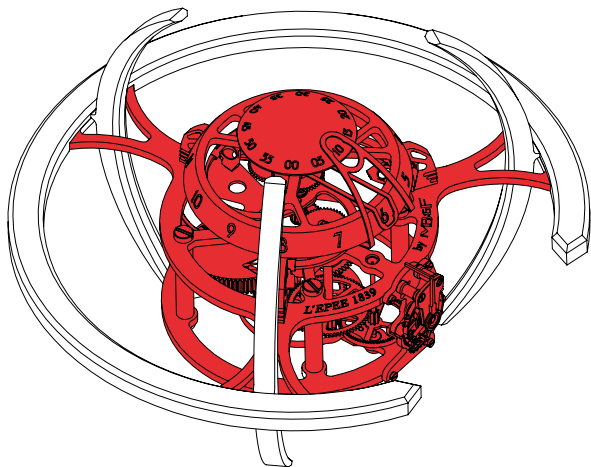

Important information	7
Care and maintenance	8
Winding up the movement	9
Setting the time	10
The Starship animation	11

## IMPORTANT INFORMATION

**PLEASE, BE VERY CAREFUL TO NEVER TOUCH THE MOVEMENT OF THE STARFLEET EXPLORER: RISK OF DAMAGE.**

**NEVER TOUCH THE COMPONENTS COLORED IN RED IN THE FOLLOWING PICTURE.**

## CARE AND MAINTENANCE

Use only a soft and dry cloth to clean the clock. Dust and particles contained in the cloth could scratch parts. Do not use any kind of cleaning products to clean the clock. It is recommended to keep the clock distant from any source of heat or vibrations. Do not permanently expose the clock to direct sunlight.

Our clocks are developed to ensure optimal accuracy and reliability. It is well accepted for a fine mechanical clock to have a few seconds variation per day and our clocks are set so as not to delay. However if you should notice a wider variation, please contact an authorized dealer who will advise you, or a L'Épee 1839 technical support center which will proceed with the necessary adjustment.

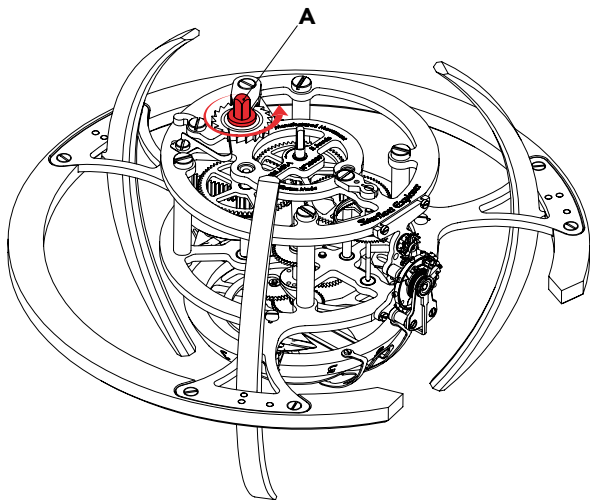

As for all horological pieces of art, it is recommended to periodically service your clock. A mechanical masterpiece requires fine oils for the lubrication of the movement. These oils deteriorate over the years. We therefore advise having the movement overhauled every 5 years.

## WINDING UP THE MOVEMENT

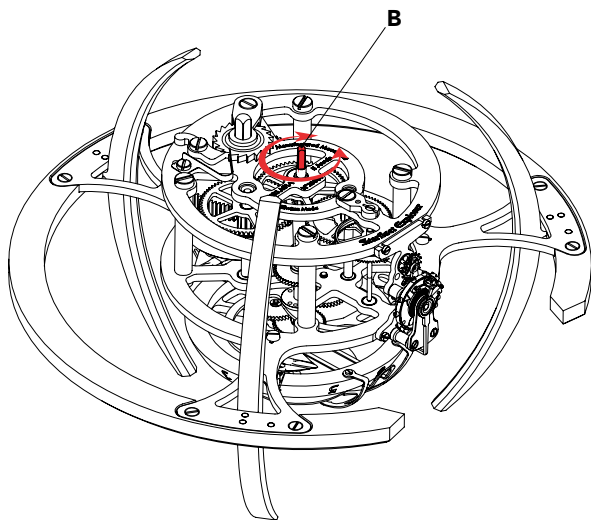

Place the clock upside down on a flat surface and wind up the movement (see point **A** on the following picture) anti-clockwise with the larger diameter hole of the key. The movement must be fully wound every 8 days. Be sure to wind up the spring completely, but without forcing it.

During the process, you can see wheels moving to allow one unique barrel to be wound up. At the end of the winding procedure, you will be able to feel the force increasing appreciably. Do not force as it is the sign that it is fully wound.

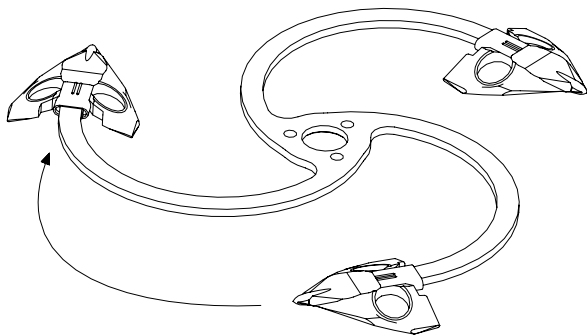

## SETTING THE TIME

Place the clock upside down on a flat surface and wind up the movement (see point **B** on the following picture). Use the smaller diameter end of the key and turn the hand-setter anti-clockwise or clockwise to set the time.

## THE STARSHIP ANIMATION

The starship animation represents the three mini "Starfleet Explorers", revolving on a 5-minute cycle.
